

Nexa Bank - Loan Guide

Loan Overview

Nexa Bank customers can apply for loans, view their existing loans, and make repayments towards accepted loans.

Loans have a current status that indicates where the loan is in its lifecycle.

Customers can view and manage their own loans. Administrative users have additional permissions to review and make decisions on loan applications.

Applying for a Loan

Authenticated customers can apply for a loan by completing the loan application form and providing the required loan information.

A loan application is initially submitted with a PENDING status.

While a loan application is pending, it is awaiting a decision from a Nexa Bank administrator.

Customers can submit loan applications through the loan application section of the application.

Loan Application Status

A newly submitted loan application has the following status:

- PENDING — The application has been submitted and is awaiting an administrative decision.

An administrator can either accept or reject a pending loan application.

Loan Decisions

Loan applications are reviewed by Nexa Bank administrators.

Administrators can make a decision on a pending loan application.

Possible decisions include:

- ACCEPTED — The loan application has been approved and the customer can make repayments towards the loan.
- REJECTED — The loan application has been declined.

A loan decision can only be made while the application is in the PENDING state.

Once a decision has been made, the loan is no longer pending.

Viewing Loans

Authenticated customers can view the loans associated with their account.

The loan information displayed to a customer can include:

- Loan ID
- Loan type
- Loan amount
- Loan duration
- Interest rate
- Monthly EMI
- Current loan status
- Accrued interest

Customers can view their loans through the loans section of the application.

Customers can only view loans associated with their own account.

Accepted Loans

An ACCEPTED loan has been approved and is available for repayment.

Customers with an accepted loan can view information about the loan and make repayments towards it.

The loan may display:

- Remaining loan amount
- Accrued interest
- Monthly EMI
- Interest rate
- Remaining duration

Loan Repayments

Customers can make repayments towards an accepted loan.

A repayment consists of:

- The loan being repaid

- The amount being paid

The repayment amount must be greater than zero.

A customer cannot make a repayment that is greater than the remaining loan amount.

Repayments can be made through the loan repayment section of the application.

Monthly EMI

The monthly EMI is the expected monthly repayment amount for a loan.

Customers can choose to make a repayment that is:

- Less than the monthly EMI
- Equal to the monthly EMI
- Greater than the monthly EMI

Repayment Below the EMI

A repayment below the expected monthly EMI may increase the remaining duration of the loan and can result in more interest being paid over the lifetime of the loan.

Customers are warned before proceeding with a repayment below the expected monthly amount.

Repayment Equal to the EMI

A repayment equal to the expected monthly EMI is the standard monthly repayment.

The repayment can be submitted without an additional repayment warning.

Repayment Above the EMI

Customers can make a repayment greater than their expected monthly EMI.

An additional repayment can reduce the remaining loan balance and shorten the remaining loan duration.

The regular monthly repayment amount remains unchanged, allowing the customer to pay the loan off sooner.

Customers are warned before proceeding with a repayment above the expected monthly amount.

Accrued Interest

Accrued interest represents interest that has accumulated on the outstanding loan amount since interest was last calculated.

The accrued interest can be displayed alongside the remaining loan amount.

The loan's interest rate is used when calculating accrued interest.

Accrued interest is calculated based on the amount of time that has elapsed since interest was last calculated.

Loan Statuses

Loans can have different statuses during their lifecycle.

Pending

The loan application has been submitted and is awaiting an administrative decision.

Accepted

The loan has been approved and is available for repayment.

Rejected

The loan application has been declined by an administrator.

Paid

The loan has been fully repaid.

A paid loan is no longer available for further repayment.

Administrative Permissions

Administrators have additional permissions relating to loan applications.

Administrators can:

- View pending loan applications.
- Accept pending loan applications.
- Reject pending loan applications.

Customers cannot make loan decisions.

Customers can only view and manage loans associated with their own account.

Loan Access and Permissions

Authenticated customers can:

- Apply for a loan.
- View their own loans.
- View their loan information.
- Make repayments towards accepted loans.

Customers cannot:

- View another customer's loans.
- Make decisions on loan applications.
- Accept or reject loan applications.

Administrators can review pending loan applications and make decisions on them.

Loan Lifecycle

A typical loan follows this lifecycle:

1. The customer submits a loan application.
2. The application enters the PENDING state.
3. An administrator reviews the application.
4. The administrator either accepts or rejects the application.
5. If accepted, the customer can make repayments.
6. The customer continues making repayments until the loan is fully repaid.
7. Once fully repaid, the loan enters the PAID state.
