

Nexa Bank - Comprehensive Card Guide

Section 1: Card Availability

Customers may have a bank card associated with their Nexa Bank account. A card is associated with a specific customer account and is intended for use by the customer to whom it has been issued.

Authenticated customers can determine whether they have a card associated with their Nexa Bank account by accessing the **Card** section of the Nexa Bank application.

The Card section provides information about the card associated with the currently authenticated customer's account, where a card exists.

A customer's card information is tied to that customer's account. Card information is not shared between customers.

Customers must be authenticated before accessing card information. Authentication ensures that a customer can only access information associated with their own account.

Customers cannot use the Card section to search for, retrieve, or view another customer's card.

Card ownership and access

A customer's card belongs to the account to which it is associated. The customer associated with that account may view their own card information where permitted.

The following principles apply:

- Customers can access their own card information.
 - Customers cannot access another customer's card information.
 - Customers cannot search for cards belonging to other customers.
 - Customers cannot retrieve card details belonging to another customer.
 - Customers cannot manage another customer's card.
 - Card information is restricted to the authenticated customer associated with the card.
 - Administrative users may have additional permissions to manage cards.
-

Section 2: Viewing Card Information

Authenticated customers can view information about their own card through the **Card** section of the Nexa Bank application.

The Card section is intended to provide the authenticated customer with information about the card associated with their account.

Depending on the information available for the customer's card, the Card section may display information such as:

- Card number.
- Card expiry date.
- Card status.
- Card security information where permitted.
- Other card-related information provided by Nexa Bank.

Customers should treat all card information as private and confidential.

Access restrictions

Card information is only available to the authenticated customer associated with the card, subject to the permissions provided by Nexa Bank.

A customer cannot use their account to access another customer's card information.

For example, if Customer A is authenticated into their Nexa Bank account, Customer A can view information associated with Customer A's card. Customer A cannot use the application to view Customer B's card.

The application must maintain this separation between customer accounts.

Customer card access rules

Customers:

- Can view their own card information.
 - Can view the status of their own card.
 - Can use permitted card controls on their own card.
 - Cannot view another customer's card information.
 - Cannot retrieve another customer's card number.
 - Cannot retrieve another customer's expiry date.
 - Cannot retrieve another customer's card status.
 - Cannot modify another customer's card.
-

Section 3: Card Status

Every Nexa Bank card has a status indicating whether the card is currently available for use.

A card can have one of the following statuses:

- **ACTIVE**

- **FROZEN**
- **BLOCKED**

The card status determines whether the card is available for normal use and whether it has been temporarily or permanently disabled.

Customers can check the current status of their own card through the Card section of the application.

ACTIVE

An **ACTIVE** card is available for normal use.

An active card has not been temporarily frozen or permanently blocked.

Customers can use an active card for normal card transactions, subject to the normal rules and restrictions applicable to their account and card.

An active card can be temporarily frozen if the customer needs to prevent its use.

An active card may also be permanently blocked where an authorised administrative action requires the card to be disabled permanently.

Important characteristics of an **ACTIVE** card

An **ACTIVE** card:

- Is available for normal card use.
 - Has not been temporarily frozen.
 - Has not been permanently blocked.
 - Can be temporarily frozen by the customer where permitted.
 - May be subject to normal account and transaction restrictions.
-

Section 4: Frozen Cards

A **FROZEN** card has been temporarily disabled.

Freezing is intended to be a temporary measure. It allows a card to be disabled without permanently disabling the card.

A frozen card cannot be used for normal card transactions while the frozen status remains active.

Where the customer is permitted to do so, the customer can unfreeze the card and return it to an active state.

Purpose of freezing

Freezing a card is appropriate when a customer wants to temporarily prevent the card from being used.

For example, a customer may temporarily freeze their card when:

- They are unsure where their card is.
- They believe the card may have been misplaced.
- They want to temporarily prevent transactions while checking whether the card is missing.
- They want to temporarily disable the card for security reasons.

Freezing should not be confused with permanently blocking a card.

Characteristics of a FROZEN card

A FROZEN card:

- Is temporarily disabled.
- Cannot be used while it remains frozen.
- May be unfrozen where the customer has permission to do so.
- Can potentially return to ACTIVE status.
- Is not permanently disabled merely because it is frozen.

Unfreezing a card

Where permitted, a customer can unfreeze their own frozen card through the appropriate card controls.

Unfreezing reverses the temporary freeze and allows the card to return to an active state.

The ability to unfreeze a card is subject to the permissions and rules provided by Nexa Bank.

A customer cannot unfreeze another customer's card.

Section 5: Blocking a Card

A **BLOCKED** card has been permanently disabled.

Blocking is different from freezing.

A blocked card cannot be used and is not treated as temporarily disabled. Blocking is a permanent action rather than a temporary card control.

A blocked card should therefore not be treated as equivalent to a frozen card.

Characteristics of a **BLOCKED** card

A **BLOCKED** card:

- Is permanently disabled.
- Cannot be used.
- Cannot be treated as temporarily frozen.
- Cannot simply be unfrozen by the customer.

- Is different from a FROZEN card.
- May require administrative action where further card management is necessary.

Blocking versus freezing

The key difference is the duration and purpose of the action.

Freezing:

- Temporarily disables the card.
- Can potentially be reversed.
- May allow the card to return to ACTIVE status.
- Is intended for temporary situations.

Blocking:

- Permanently disables the card.
- Cannot simply be reversed through the normal customer freeze/unfreeze control.
- Prevents the card from being used.
- Is intended as a permanent administrative action.

Administrative permissions

Administrators have additional permissions to manage card status where applicable.

An administrator may be able to block a card as part of an administrative action.

Customers do not have permission to manage another customer's card.

Customers cannot block another customer's card.

Section 6: Card Controls

Nexa Bank provides card controls that allow customers to manage their own card where the customer has the required permissions.

Card controls operate only on cards associated with the authenticated customer's account.

Customer permissions

A customer can:

- View their own card information.
- View their own card status.
- Freeze their own card where permitted.
- Unfreeze their own card where permitted.
- Manage their own card using the card controls provided by the application.

A customer cannot:

- View another customer's card details.
- View another customer's card number.
- View another customer's card expiry date.
- View another customer's card status.
- Change another customer's card status.
- Freeze another customer's card.
- Unfreeze another customer's card.
- Block another customer's card.
- Use their account to manage another customer's card.

Administrator permissions

Administrators have additional permissions compared with ordinary customers.

Where applicable, administrators may be able to manage card status, including blocking cards.

Administrative permissions do not mean that ordinary customers gain access to administrative card-management functionality.

Section 7: Card Status Transitions

Card status represents the current state of a card.

The primary statuses are:

Status	Meaning
ACTIVE	Card is active and available for normal use.
FROZEN	Card is temporarily disabled.
BLOCKED	Card is permanently disabled and cannot be used.

ACTIVE → FROZEN

An active card may be frozen when a customer temporarily wants to prevent the card from being used.

Freezing changes the card from:

ACTIVE → FROZEN

The card is then temporarily disabled.

FROZEN → ACTIVE

A frozen card may be unfrozen when the customer is permitted to do so.

Unfreezing changes the card from:

FROZEN → ACTIVE

The card is then available for normal use again.

ACTIVE → BLOCKED

A card may be permanently blocked through an authorised administrative action.

Blocking changes the card from:

ACTIVE → BLOCKED

The card is then permanently disabled.

FROZEN → BLOCKED

A frozen card may also be permanently blocked through an authorised administrative action where applicable.

Blocking a frozen card changes it from:

FROZEN → BLOCKED

The card is then permanently disabled.

BLOCKED cards

A BLOCKED card is permanently inactive.

A blocked card should not be treated as merely frozen, and the normal customer unfreeze action does not apply to a blocked card.

Section 8: Freezing Versus Blocking

Freezing and blocking are separate card-management operations and must not be treated as interchangeable.

Freezing

Freezing is a **temporary** action.

When a customer freezes a card:

1. The card's status changes to FROZEN.
2. The card is temporarily disabled.
3. The card cannot be used while it remains frozen.
4. The customer may be able to unfreeze the card.
5. If permitted, the card can return to ACTIVE status.

Blocking

Blocking is a **permanent** action.

When a card is blocked:

1. The card's status changes to BLOCKED.
2. The card is permanently disabled.
3. The card cannot be used.
4. The customer cannot treat the card as temporarily frozen.

5. Normal unfreeze functionality does not apply.

Important distinction

A customer who simply wants to temporarily prevent their card from being used should use the **freeze** functionality where available.

Blocking should not be described as another form of freezing.

Section 9: Lost or Misplaced Cards

If a customer believes their card has been lost or stolen, they should contact Nexa Bank immediately.

A customer may use the available card controls to freeze their card where appropriate and where the functionality is available to them.

Freezing can temporarily prevent the card from being used while the customer determines whether the card has actually been lost.

For example, if a customer cannot immediately find their card but believes they may have misplaced it, they may temporarily freeze it.

If the card is subsequently found and the customer is permitted to do so, they may be able to unfreeze the card.

If the customer confirms that the card has been lost or stolen, they should contact Nexa Bank immediately.

Important distinction

Freezing a lost or potentially lost card is a temporary protective action.

It does not permanently block the card.

A permanently blocked card cannot be treated as a frozen card and cannot simply be reactivated through the normal unfreeze process.

Section 10: Card Expiry

Every Nexa Bank card has an expiry date.

The expiry date identifies when the current card reaches the end of its validity period.

Customers can view their card's expiry date through the Card section of the application where this information is available.

Customers should use the replacement card provided by Nexa Bank once the current card expires.

The expiry of a card should not be confused with freezing or blocking.

Expiry compared with card status

Expiry:

- Relates to the validity period of the card.
- Indicates when the current card reaches its expiry date.
- May require the customer to use a replacement card.

FROZEN:

- Temporarily disables the card.
- May be reversed where permitted.

BLOCKED:

- Permanently disables the card.

- Is not the same as normal expiry.
-

Section 11: Customer Security and Card Information

Customers should treat their card information as confidential.

Card information is associated with the customer's own account and should only be accessed by the authenticated customer or authorised personnel with the appropriate permissions.

Customers cannot access another customer's card information.

The application's access controls ensure that card information is associated with the authenticated account.

A customer should not attempt to access, retrieve, modify, freeze, or block a card belonging to another customer.

Examples

Example 1 — Viewing your card

A customer signs into their Nexa Bank account and opens the Card section.

They can view the card associated with their account.

Example 2 — Viewing another customer's card

A customer attempts to access another customer's card.

This is not permitted.

Example 3 — Freezing your card

A customer believes they have misplaced their card.

They use the available card controls to freeze their own card.

The card becomes FROZEN and is temporarily disabled.

Example 4 — Unfreezing your card

The customer finds the card and is permitted to reactivate it.

They use the appropriate card control to unfreeze the card.

The card returns to ACTIVE status.

Example 5 — Blocking a card

An authorised administrator determines that a card needs to be permanently disabled.

The administrator can block the card where the appropriate administrative permission exists.

The card becomes BLOCKED and cannot be used.

Section 12: Card Status Reference

The following table provides the definitive status reference for Nexa Bank cards.

Status	Description	Can the card be used?	Temporary?
ACTIVE	Card is active and available for normal use.	Yes	N/A

FROZEN	Card is temporarily disabled.	No	Yes
BLOCKED	Card is permanently disabled.	No	No

ACTIVE

The card can be used normally.

FROZEN

The card has been temporarily disabled and cannot be used until it is reactivated.

BLOCKED

The card has been permanently disabled and cannot be used.

Section 13: Important Rules for the Banking Assistant

When answering questions about Nexa Bank cards, the following rules should be followed:

- 1. **ACTIVE** means the card is available for normal use.
- 2. **FROZEN** means the card is temporarily disabled.
- 3. **BLOCKED** means the card is permanently disabled.
- 4. Never describe FROZEN and BLOCKED as the same status.
- 5. Freezing is temporary.
- 6. Blocking is permanent.

7. A customer can only manage their own card.
 8. Customers cannot access another customer's card information.
 9. Customers cannot change another customer's card status.
 10. Customers cannot freeze another customer's card.
 11. Customers cannot block another customer's card.
 12. Administrators have additional permissions to manage card status where applicable.
 13. A frozen card may be unfrozen where the customer has permission to do so.
 14. A blocked card cannot simply be unfrozen through the normal customer freeze/unfreeze functionality.
 15. If a customer believes their card has been lost or stolen, they should contact Nexa Bank immediately.
 16. A lost or potentially lost card may be frozen to prevent unauthorised use.
 17. Every card has an expiry date.
 18. Customers should use the replacement card provided by Nexa Bank once their current card expires.
 19. Do not invent additional card functionality, fees, limits, procedures, or policies that are not documented in this guide.
 20. When information is not available in this guide, the assistant should state that the information is not available in the provided knowledge base rather than guessing.
-

Section 14: Quick Reference

Card available? Authenticated customers can check the Card section of the application.

Who can view the card? The authenticated customer associated with the card.

ACTIVE: Available for normal use.

FROZEN: Temporarily disabled. May be reactivated where permitted.

BLOCKED: Permanently disabled. Cannot be used.

Freeze: Temporary card disablement.

Unfreeze: Reverses a temporary freeze where permitted.

Block: Permanent card disablement and an administrative action where applicable.

Lost or stolen card: Contact Nexa Bank immediately. The card may be frozen to prevent unauthorised use.

Expired card: Use the replacement card provided by Nexa Bank.

Another customer's card: Not accessible or manageable by ordinary customers.
